Education

Bachelor of Technology, Electrical Engineering — Academy of Technology

2022 – 2026 | CGPA: 7.29/10

Experience

Salesforce Developer Intern

May 2025 – July 2025

SmartBridge (In collaboration with AICTE & Salesforce)

Remote

- Designed and implemented automated business workflows using **Apex triggers**, **Flow Builder**, and Process Automation, reducing manual operational overhead and improving cross-team process efficiency.
- Engineered event-driven, responsive UIs with **Lightning Web Components (LWC)**, enabling real-time data interaction and streamlining UI-to-backend data flow.
- Implemented data security architecture — Role Hierarchies, Sharing Rules, and Profile-based permissions — enforcing end-to-end data integrity; designed custom object schemas to support scalable data architecture.
- Attained the **Apex Specialist Superbadge** by solving real-world business scenarios involving asynchronous processing, triggers, and system integration.

Projects

Customer Churn Analysis & Prediction | [GitHub](#) | SQL, Power BI, Python, Power Query, DAX, KPI Scikit-Learn

- Built an end-to-end churn pipeline: SQL-based data extraction, cleaning, EDA, and feature engineering on structured customer datasets.
- Applied statistical modeling with classification algorithms (Logistic Regression, Random Forest) evaluated via ROC-AUC and F1-score to prioritize retention strategies.
- Developed Power BI dashboards using DAX measures and Power Query transformations.
- Delivered decision-ready Power BI dashboards using DAX and Power Query translating model outputs into actionable business recommendations.

Network Security Threat Detection | [GitHub](#) | Python, Scikit-Learn, MLflow, MongoDB, AWS

- Built an end-to-end ML pipeline identifying network threats via log analysis and rule-based anomaly detection (unusual ports, high-frequency requests), enabling faster incident response.
- Used **MLflow** for experiment tracking and model validation; designed a modular automated workflow for repeatable security assessments with minimal manual intervention.

Personalized Book Recommender System | [GitHub](#) | NLP, Python, Gradio, OpenAI

- Developed a semantic search engine using NLP to process unstructured text and recommend books based on user intent; cleaned and standardized categorical data achieving 95%+ recommendation accuracy.

Technical Skills

Programming: Python, SQL, Java

Business Intelligence: Power BI, DAX, Power Query, Dashboard Development, KPI Design

Data Analytics: Data Modeling, Statistical Modeling, Data Cleaning, EDA, Feature Engineering

Visualization: Interactive Dashboards, Matplotlib, Seaborn, Advanced Excel

Databases: MySQL, MS SQL Server, MongoDB

Automation & Integration: REST APIs, Workflow Automation, Process Automation

Cloud & DevOps: AWS (EC2, S3, IAM), Git, GitHub, Docker

Platforms: Salesforce (Apex, LWC, Flow Builder), ServiceNow

Certifications

Oracle Certified Associate: MySQL Implementation Certified Associate. [\[Verify\]](#)

Oracle Certified Professional: OCI Data Science Professional. [\[Verify\]](#)

Achievements

Smart India Hackathon (SIH) 2024: Top 8 nationally among 500+ teams; delivered rapid prototyping and cross-functional problem-solving under time pressure.

RC Car Competition | 1st Place: Led a 5-member team to 1st place through task coordination, iterative testing, and decisive team management.

IEEE Student Member: Active member of IEEE Student Branch (AOT) — technical seminars, workshops, and collaborative engineering discussions.
